WORK EXPERIENCE

EHR Data Analyst I

Fresno, CA

Kings View

OCT '22 – Present

- Oversee data requests from external agencies and internal teams using the Credible EHR System, ensuring accuracy and compliance.
- Utilize SQL and Access Database to identify and correct data discrepancies, ensuring optimal data quality for customized reporting.
- Design and maintain data collection forms, integrating data across multiple sources, ensuring seamless data flow within the EHR system.
- Enhance SQL proficiency to support data filtration, report creation, and insights extraction from EHR datasets.
- Identify inefficiencies in EHR data workflows and implemented Python-based automation solutions, streamlining recurring data tasks and significantly improving turnaround time and accuracy.

Computer Technician

Reedley, CA

Clovis Computer

FEB '21 – DEC '21

- Diagnosed and resolved hardware and software issues, ensuring system functionality and uptime, critical for maintaining system integrity and performance in a database environment.
- Developed a Python-based script to track service hours and staff working hours, improving data accuracy and reducing manual tracking errors—skills directly applicable to database reporting and data management.
- Provided technical support to clients, troubleshooting system issues and offering cost-effective solutions, aligning with the need for system administration and ensuring data consistency.
- Assisted with the setup and integration of new hardware and software, ensuring proper system functionality and supporting ongoing system performance optimization.

PERSONAL PROJECTS

Beat Trainer

MAY '18 – JUN '18

- Developed an interactive rhythm training game to enhance musicians' timing using an embedded device with manual hand-tapping input.
- Integrated multiple levels with increasing difficulty to help users improve their speed and timing while maintaining engagement in a fun, game-like format.

Card Reader for SHPE at UCR

AUG '18 – JUN '18

- Designed a card reader system to streamline guest sign-ins by extracting data from student ID cards, drastically reducing manual entry time.
- Enhanced meeting efficiency by integrating the card reader with Google Forms, automatically registering returning members within seconds.

Seatbelt Savior (Winner: <https://goo.gl/vAzKA2>)

NOV '18 – DEC '18

- Created a system inspired by Tesla to monitor seatbelt usage and take corrective actions, including emergency stops and DUI detection.
- Developed features to deactivate unused seats and alert emergency contacts in case of impaired driving, enhancing overall vehicle safety.

SKILLS

- | | | | |
|----------------------|------------------------|-------------------|---------------------|
| • Microsoft Office | • ITSM – Fresh Service | • Problem-Solving | • Python |
| • EHR Data Analysis | • Data Extraction | • Data Analysis | • Technical Support |
| • Team Collaboration | • SQL (Intermediate) | • Documentation | • Automation |

EDUCATION

Bachelor of Science (BS), Computer Engineering

University of California, Riverside (UCR)

Riverside, CA

Graduated JUN '20
